Mosses
Flora

And in *Sycopsis* (Hamamelidaceae) and
Amislaea (Compositae) in the Malay Peninsula.

In this Bulletin, Vol. VII, part 1 page 103 I recorded an unidentified species of *Sycopsis* from the Malay Peninsula and remarked that the genus had previously been recorded only from the Himalayas, China and the Philippines. Dr. C. G. G. T. Van Steenis, of the Herbarium of the Botanic Garden at Buitenzorg, has kindly informed me that a species of *Sycopsis*, preliminarily identified as *S. philippinensis*, has been recorded from Sumatra.

The same authority is of the opinion that *Amislaea repens* Merr. (recorded by me from Cameron Highlands, loc. cit. p. 105) is synonymous with *A. pteropoda*, a species occurring in Sumatra ~~and as well as~~ ^{and} the S.E. Asiatic region.

Maintaining Flora

It is requested that the following number be quoted in the reply to this letter, and that replies be addressed to the office, and not to individuals by name.

No. 86 in F.R.O. 70/35

FOREST RESEARCH INSTITUTE,
KEPONG, SELANGOR, FED. MALAY STATES.

25th January 1937

Dear Corner,

I have completed my study of your Magnoliaceae and shall return your sheets soon. I have made some alterations in determination.

We have 16 named species, all of which I have seen with the exception of Talauma sebassa Miq. All species are represented in our herbarium with the exception of Talauma lanigera Hook.f. and Pachylarnax praecalva Dandy. Could you spare us one of your Curtis' sheets of each species? You have 5 of Curtis 3018 (T.lanigera) and 8 of Curtis 3012 (P.praecalva).

I have retained your only sheet named T. sebassa and shall, with your approval, send it to Dandy at B.M. for comparison with the type. At the same time I might send four undetermined sheets.

The most interesting discovery is Michelia Champaea wild at Cameron Highlands. I am sending you a duplicate. (When I return your specimens)

Yours sincerely,

cp

E.J.H. Corner, Esq.,
Botanic Gardens,
SINGAPORE.

Mountain Flora

It is requested that the following number be quoted in the reply to this letter, and that replies be addressed to the office, and not to individuals by name.

No. 104 in F.R.O. 70/35

FOREST RESEARCH INSTITUTE,
KEPONG, SELANGOR, FED. MALAY STATES.

15th June 1937

Dear Corner,

Many thanks for the Cameron Highlands collections which arrived safely. I have roughly looked over them. I am particularly interested to see a specimen of Wightia borneensis. I collected it from this locality once myself but the only other collection from the M.P. is from Taiping Hills. It is an amazingly attractive thing in flower and I tried to strike cuttings but without success.

I shall be interested to see your new Artocarpus. Yes I'm quite sure the chempedak is wild in the Peninsula. I have often seen it in jungle where it is usually called bangkong or chempedak hutan. Malays say that the jungle form has not edible pulp like the cultivated form but the seeds are edible - which is the sort of variation one might expect as a result of cultivation.

I am now working on Xanthophyllum.

Yours sincerely,

P.S.

I see you claim in the Annual Report to have first discovered Anemone sumatrana at C.H.. We collected it there twice in 1931. Henderson identified the specimens but cannot have kept a record of them.

E.J.H. Corner, Esq.,
Botanic Gardens,
SINGAPORE.

24th July, 1934

No. 19 in F.R.O. 156/33.

Dear Henderson,

Thanks for yours of 19th instant and for the cheque.

I went to see Mavor the other day but he is on leave. Brown told me that as all the plates are on one long block it will be cheaper to do the whole set for the Oxford reprints. So there will be an excess of copies of the plates of the species not included in the Oxford portion, but no doubt some use may be found for this.

I am looking forward to the arrival of the Tapis plants.

By the way I found Acer niveum Bl. (I expect it is niveum) at Kuala Habu last time I was up the highlands.

Yours sincerely,

M. R. Henderson, Esq.,
Botanic Gardens,
Singapore.
